## DETAILED ACTION

### ***Allowable Subject Matter***

1. Claims 8-12 are allowed over prior art of record. The following is an examiner's statement of reasons for allowance: Hansen et al. (US 5640490) disclose a sensitivity enhancement apparatus to be connected to a chaos theoretical voice diagnosis apparatus for use as a preprocessing device, the sensitivity enhancement apparatus comprising: a voice input apparatus for acquiring the uttered voice (*col. 8, lines 40 to col. 9, line 67*); an analog-digital conversion apparatus for converting the uttered voice acquired by the voice input apparatus to digital voice data (*col. 8, lines 40 to col. 9, line 67*); a comparator for selecting, from the digital voice data, voice data having a level greater than or equal to a certain level, for outputting the selected digital voice data (*col. 8, lines 40 to col. 9, line 67, make determination whether the input voice data contain voice or noise (quiet)*); a voice data cutout apparatus capable of cutting out a phoneme unit of the selected digital voice data of a second level which is greater than or equal to the first level, and including an offset section for (i) providing a cutout start moment and a cutout end moment, according to which the cutout apparatus cuts out the phoneme unit and (ii) providing an offset value less than or equal to one phoneme (*col. 8, lines 40 to col. 9, line 67, if the comparison section determines that the input voice data contain voice, the voice data is selected for further processing in identifying phoneme*); and a voice data output apparatus for outputting the phoneme unit cutout by the voice data cutout apparatus (*speech output 50 in figure 2*). Hansen et al. fail to specifically disclose wherein, when the cutout end moment is located at a middle of a phoneme of

the phoneme unit cut out by the voice data cutout apparatus, the voice data cutout apparatus is operable to shift the cutout end moment to an end of the phoneme by shifting the cutout end moment by the offset value, and wherein, when the cutout start moment is located at a middle of a phoneme of the phoneme unit cut out by the voice data cutout apparatus, the voice data cutout apparatus is operable to shift the cutout start moment to a beginning of the phoneme by shifting the cutout start moment by the offset value. Furthermore, it would have not been obvious to one of ordinary skill in the art at the time of invention to modify Hansen et al. in order to obtain the claimed invention. Therefore, claims 8-12 are allowed over prior art of record.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
